Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

April 7, 2024

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Understanding cell injury, death, and adaptations is crucial for diagnosing and treating diseases.

► This chapter explores the mechanisms and implications of these cellular processes.

Necrosis

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Necrosis is a form of cell death characterized by cell membrane breakdown, organelle swelling, and rupture.

▶ It leads to inflammation in surrounding tissue.

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Caused by external factors like toxins, infections, or trauma.

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Types include coagulative, liquefactive, caseous, and fat necrosis.

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Example: Coagulative necrosis often occurs in the heart after a myocardial infarction, where lack of oxygen leads to cell death.

Apoptosis

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

- ► Apoptosis is programmed cell death, crucial for removing damaged or unnecessary cells.
- ► Characterized by cell shrinkage, chromatin condensation, and apoptotic bodies formation.

Characteristics of Apoptosis

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

▶ Does not initiate inflammation.

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► **Example:** The elimination of webbing between fetal fingers and toes is a natural occurrence of apoptosis.

Cellular Adaptations

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Adaptations include changes in size (atrophy, hypertrophy), number (hyperplasia), form (metaplasia), and function.

Apoptosis Cellular

Adaptations Intracellular

Accumulations

- ► Atrophy: Decrease in cell size or number, e.g., in unused muscles.
- ► Hypertrophy: Increase in cell size, e.g., in heart muscle due to hypertension.

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► Metaplasia: Change of one cell type to another, e.g., in the respiratory tract of smokers.

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

► **Example:** Hyperplasia occurs in the endometrium during the menstrual cycle, preparing for potential pregnancy.

ntracellular Accumulations

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

- ▶ Buildup of substances cells can't use or dispose of.
- Examples include lipids in liver cells, proteins in kidney tubule cells, and pigments like lipofuscin.

Example of Intracellular Accumulations

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

➤ **Example:** Fatty liver disease results from the accumulation of lipids in liver cells, often due to alcohol abuse or obesity.

Summary

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

- ► This chapter covered the fundamental concepts of cell injury, death, and adaptations.
- Understanding these processes is essential for diagnosing and managing diseases.
- ► We explored necrosis, apoptosis, cellular adaptations, and intracellular accumulations.

Chapter 1: Cell Injury, Cell Death, and Adaptations

Professor's Name

Introduction

Necrosis

Apoptosis

Cellular Adaptations

Intracellular Accumulations

Summary

Thank you for your attention! Questions?
